                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       \delta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Curlin protein csgA precursor - Escherichia coli (strain K-12)

NyAlternate names: csgA protein, major curlin protein
Cippedies: Escherichia coli
Cippedies: Escherichia coli
Cipate: 12-Feb-1998 #sequence revision 20-Feb-1998 #text_change 01-Mar-2002
Cipate: 12-Feb-1998 #sequence revision 20-Feb-1998 #text_change 01-Mar-2002

A;Title: The complete genome sequence of Escherichia coli K-12.
A;Reference number: A64720; MUID:97426617; PMID:9278503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Albescription: minor component of wild-type curli; interaction between CsgA and CsgB tri
A:Note: curli are thin, coiled fibers expressed on the surface of Escherichia coli that
and H-kininogen; in the absence of CsgA, CsgB can self-assemble into polymers
F:1-21/Domain: signal sequence #status predicted <51G>
F:22-151/Product: minor curlin chain #status predicted <MAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Residues: 1-151 <BLAT>

"The ovo gene of Drosophila encodes a zinc finger protein required for ovo gene of Drosophila encodes a zinc finger protein required EMBO of emale germ line development.";

-I. FUNCTION: REQUIRED FOR SURVIVAL AND DIFFERENTIATION OF FEMALE GERM LINE CELLS. PLAYS A ROLE IN GERM LINE SEX BETERMINATION.

-I. SUBCELLULAR LOCATION: NUCLEAR (POCENTIAL).

-I. DEVELOPMENTAL STAGE: FIRST APPEARS IN THE GERMARIUM AND ACCUMULATES IN UNRASE CELLS DURING OCCENESIS. STORED IN THE EGG, BUT, IS RAPIDLY LOST IN THE EMBRYOS EXCEPT FOR ITS CONTINUED PRESENCE IN THE GERM LINE PRECURSOR POLE CELLS.

-I. SIMILARITY: Contains 4 C2H2-type zinc fingers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         106 WNAKNYDQLVTRVVTHEMAHANQ--TASDSSV------MVRQVGFGNNATANQY 151

                                                                                                                                                                                                                                                             -!- FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.
-!- CATALYTIC ACTIVITY: Preference for hydrophobic residues at Pl and Pl', and basic residues at P2 and P3'. A model nonapeptide is cleaved at -Ala-Tyr-|-Leu-Lys-Lys-.
-!- CORACTOR: Binds 1 zinc ion per subunit.
-!- SUBCELLUIAR LOCATION: Attached to the membrane by a GPI-anchor.
-!- PTM; THE PHOSPHATIDYLINOSITOL MOIETY OF THE GPI-ANCHOR CONTAINS A FULLY SATURATED, UNBRANCHED 1-O-ALKYL CHAIN (MAINLY C24:0) AND A MIXTURE OF FULLY SATURATED UNBRANCHED 2-O-ACYL CHAINS (C12:0, C14:0, L16:0, AND C18:0).
                                       MEDLINE=98416698; PubMed=9739094; Schlagenhauf E., Etges R., Metcalf P., He crystal structure of the Leishmania major surface proteinase leishmanolysin."; Structure 6:1035-1046(1998).

0
Blochem. Parasitol. 57:31-46(1993).
FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.
                                            CATALYTICAL ACTIVITY: Preference for hydrophobic residues at Pl and Pl' and basic residues at P2 and P3'. A model nonapeptide is cleaved at -Ala-Tyr-|-Leu-Lys-Lys-
COFACTOR: Binds 1 zinc ion per subunit (By similarity).

DEVELOPMENTAL STAGE: Expressed in both the promastigote and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (POTENTIAL).
